

Public Executive Summary

Skillman DownStroke, LLC of Keller, TX offers the marketplace a revolutionary pump technology for the extraction of subsurface fluids that looks to make the majority of existing pumps obsolete. This patented down-hole sucker rod pump can be used to produce oil wells, natural gas wells, and water wells anywhere in the world. Sucker rod pumps are used in over 90% of oil wells needing artificial lift in the U.S. alone. The Skillman DownStroke pump is a completely unique production solution and represents a giant leap forward in performance and an exceptional value for customers. In most wells, this pump can add significant gains to users' bottom line both in increased revenues and decreased costs. These gains provide an exceptional return on investment for the customer and a strong motivation to buy from Skillman DownStroke.

Benefits of the Skillman DownStroke Pump include:

- 100% Efficient
- Produces more fluid
- Consumes less energy
- Extends run times
- Reduces rod failures
- Performs in problem wells

Consider the Skillman DownStroke pump in context. All other rod pump manufacturers make pumps similar to each other. They must compete on price and thin margins and try to differentiate based on service. The conventional lift rod pumps they sell are very inefficient and prone to failure, but it is all the world has ever known. Historically, the Chinese first used sucker rod lift methods to lift underground water as early as 400 B.C. Though the materials and details have changed, the underlying concepts and technology of conventional rod pumps *have not changed in 2400 years*. The Skillman DownStroke pump *is that change*, a revolution in pumping. It uses gravity to displace fluid and never lifts it. The Skillman DownStroke is a patented, market disrupter in the right industry at the right time. Demand and prices for oil and gas are near all-time highs, and producers of oil and gas are currently increasing capital investments in technologies that will enhance recovery. Over the next few years, Skillman DownStroke is uniquely positioned to take advantage of these opportunities and dominate the industry.
